

Hurricane Katrina Model Results

Landfall Expected Within **2** Days

**For Official
Use Only!**

Information provided on the following page displays the **most probable hurricane track** based on information from the National Hurricane Center (NHC) **for the Atlantic Coast of Florida only**. These projections are based on information from the NHC (1100 - 08/24/2005) forecast.

Details about this model may be obtained at <https://englink.usace.army.mil> or contact ENGLink at 1-877-936-4546

-  Tropical Storm
-  Category 1 Hurricane
-  Category 2 Hurricane
-  Category 3 Hurricane
-  Category 4 Hurricane

Use Only!**

Ice/Water Commodities - Trucks/Distribution Lanes Ramp-up (Number of Trucks Each Commodity and Lanes Anticipated - end of each day)							
					Commodity Trucks	Within Hurricane Force Winds	
		Debris (cu yds)	Day One (25%)*	Day Two (50%)*	Day Three (100%)*	Day 1-3 Total	Population Households
NHC Forecast Track							
Florida		1,891,000	50	58	58	166	1,451,000 608,000
Total		1,891,000	50	58	58	166	1,451,000 608,000
Key assumption is that establishment of distribution lanes will be the limiting factor.							
* Assumption is that States/locals (FL is the * exception) will have the capability to establish about 25% of needed distribution lanes in the first 24 hours post-landfall, about 50% of needed distribution lanes in the first 48 hours after landfall, and all needed lanes by 72 hours post landfall. Florida, due to past experience, estimates they can establish up to 50 distribution lanes per day.							
** Assumption for Katrina - Assumption is that 20 percent of the resident population will require ice/water due to power outages in areas experiencing hurricane force winds							

Information provided on the following pages display the **most probable hurricane track** based on information from the National Hurricane Center (NHC) for the Atlantic Coast of Florida only. These projections are based on information from the NHC (1100 - 08/24/2005) forecast.
